

# WHAT'S NEW

CRM

IPM

Virus Testing

RFID

AP Automation

Partnerships

Picas Portal

## **CRM**

A CRM solution allows you to see live and historical sales data for a selected customer or customers. All customer activity that takes place in your business is now available to you in our CRM solution.

## **IPM**

Enter and track all the pests you need to be watching. Utilize tolerance ranges to assist in determining threat levels so necessary action can be taken to mitigate problems.

## **VIRUS TESTING**

Assign tests to production schedules at desired intervals and note which tests are to be done in-house or through outside vendors. Run testing reports to see where crop samples need to be taken, where they can be found, and view historical data.

## **RFID**

Track your crop inventory from planting through shipping and everything in between. The TPG team has implemented RFID functionality in several areas of Picas, preparing a gateway that will allow vendors like WestRock, Mastertag and others to integrate their technology with the Picas ERP solution.

## **AP AUTOMATION**

Experience streamlined operations through our Picas integration with Yooz, an automated supplier invoice processing system. Say goodbye to manual entry and matching of invoices against purchase orders. Enjoy the efficiency of a robust workflow and notification system designed for seamless approval of supplier invoices.

## **PARTNERSHIPS**

Partnering with other industry leaders allows us to provide you with the most complete system to manage all of your operational needs. Our newest integrations include broker integrations with BFG and Carlin, and AP Automation integration with Yooz, credit card management with Stripe, and RFID with West Rock and MasterTag. Stay tuned, there are always more to come!

## **PICAS PORTAL**

We are excited to introduce a new training and resource platform for all Picas users. This comprehensive solution provides a seamless experience and enhances training, education, community involvement, and informational updates in one place.
