

# WEBSITE HOSTING

With TPG, you're not just getting a hosting provider, you're getting a *partner* invested in ensuring your web presence is reliable, secure, and hassle-free.

## QUALITY

The WordPress hosting market is saturated, but we go beyond basic hosting. We focus on uptime, security, and performance to ensure your site runs smoothly and reliably. WordPress sites are highly targeted, and with our experienced team, you can focus on content while we manage the technical side. Our service is similar to top-tier plans like WP Engine's, but with the added benefit of our partnership, which ensures faster, more tailored support.

## SECURITY

Security is our top priority, especially for public-facing sites. We stay updated on WordPress vulnerabilities and perform regular security checks. Our enterprise-level Web Application Firewall (WAF) from Barracuda offers superior protection against threats, with custom tuning for your site. We also keep your infrastructure up-to-date to ensure compatibility and block zero-day threats.

## PERFORMANCE

We invest in high-quality, performance-optimized infrastructure, providing dedicated resources for your site without competing for server space. Using premium Azure hardware, accelerated networking, and CDN caching, we ensure fast and reliable performance. If your site needs more resources, we'll scale it without additional costs.

## RELIABILITY

Our migration and onboarding processes ensure no downtime, with extensive testing before going live. Daily backups and plugin update coordination protect your site, while proactive monitoring ensures 100% uptime. We aim to be more than just a hosting provider—our technical team is here to support and maintain your site so you don't have to worry about it.
